- Writing reusable, testable, and efficient code.
- Design and implementation of low-latency, high-availability, and performance application.
- Implementation of security and data protection.
- Integration of data storage solutions in a file system

PROJECT MANAGEMENT

1. **Communication -** After the project is finalized, the client is introduced to the assigned Business Analyst. Project-related communications are carried out by the Business Analyst. This includes work planning, development, and design track, and feedback management. All correspondence is carried out by emails, instant messengers, telephonic conversations and personal meetings.
2. **Reporting and Status Update -**The entire project will split into deliverables and the assigned manager explains to the clients how the development is going to be carried out. He also ensures what and when the client receives updates and also reminds and discusses feedbacks. This allows transparency in project tracking and the clients have a clear vision of the whole project at every stage of development.

3. **Feedback and Change Management** - All changes and feedbacks are maintained in our customized change management system, which enables to determine the nature of the change and how it relates to the scope of the project. All changes are clearly discussed and manipulated, thus enabling the client to have a clear understanding of the project tenure and cost.

4. **Risk Analysis -**Every development process is subjected to risks in terms of development and understanding. Our expertise in risk analysis and mitigation enables us to evade the vicissitudes and ensure on-time delivery.

5. **Knowledge Transfer -**This includes knowledge sharing and document transfers like project specifications, development schedule, design understanding, test plan, help manuals, and general guidelines.

6. **Change Management Request -**After requirements freeze if any changes occur then it comes in under these categories. Our team will manages it by analysis the effected factor like project structure, variables of project, delivery time, cost etc. Meanwhile project development will be continuing and decision will be taken by both the parties consent.
